

İZMİT CRUDE OIL REFINERY

www.tupras.com.tr

PROCESSING CAPACITY

The İzmit Refinery started production in 1961, with a 1 million tons/year capacity of crude oil processing. As a result of significant capacity augmentation and investments over the years, its design capacity reached 11.5 million tons/year. Following modernization efforts to increase white product productivity, the crude oil processing design capacity was registered at 11.0 million tons/year. İzmit Refinery is located at the center of a consumption hub that accounts for about 33% of Turkish petroleum products consumption. The refinery is capable of producing at Euro V standards in compliance with EU norms.

NELSON COMPLEXITY

The Residuum Upgrading Facility, which was commissioned and began test production at end 2014, started up full scale production in May 2015. As a result, a total of 12.1 million tons of material, including 11.2 million tons of crude oil and semi finished products, were processed at the RUP Facility at maximum capacity.

STORAGE CAPACITY

The production of its main petroleum products LPG, naphtha, gasoline, jet fuel, kerosene, diesel, heating oil, fuel oil and bitumen amounted to 11.3 million tons. Total domestic sales amounted to 10.7 million tons, while total sales were 13.6 million tons in 2015.
